Current DGMK-Projects

Representation of AGQM in DGMK's Project attending Committees

- DGMK 783 Examination and evaluation of the content of polar species in diesel fuels with regard to their tendency to deposit formation
- DGMK 791 Determination of the chemical and physical stability of middle distillates with several alternative components under different storage conditions
- DGMK 792 Development of a no-harm application test for heating oil additives to avoid undesirable side effects of additives when used in heating oil burner systems
- DGMK 798 Development of a rapid aging method for middle distillate substitutes to simulate the (long-term) storage stability behavior by means of parallel online measurement of several stability parameters
- DGMK 823 Limitation of microbial degradation of middle distillates
