Information about the Cold Properties of Biodiesel

Berlin, 16 November 2018 – Just in time for the start of the cold season, Association Quality Management Biodiesel (AGQM) publishes a new leaflet on the cold properties of biodiesel.

Interested parties will thus be provided with all important information on dealing with biodiesel in a clear and concise manner. The leaflet “*Cold Properties of Biodiesel*” first explains the basic parameters and standards and then provides a deeper insight into different FAME types and fatty acid patterns, which have an impact on the cold properties of biodiesel. In addition, the influence and the mode of action of additives are described.

The current leaflet complements the series of brochures that already provide information on tank and storage, biodiesel analytics, recommendations for additional requirements for use as blend component and the transport of biodiesel.

The new and all existing leaflets are available on the AGQM website (www.agqm-biodiesel.com) under “Downloads” or on request at info@agqm-biodiesel.de.

AGQM is an organization founded by leading companies of the German biodiesel industry. As technical association AGQM predominantly deals with all issues concerning the quality management of biodiesel and its by-products.
