

Press Release

Pharmaceutical glycerol at its best

Berlin, November 18th 2021 – The registration for the round robin test for pharmaceutical glycerol of the Association Quality Management Biodiesel (AGQM) is now possible.

For the quality assurance of pharmaceutical glycerol, various building blocks such as standard regulations, QM reviews and functional analysis are required system. As an important tool for quality assurance, round robin tests have proven to be an indispensable tool in everyday life to check and improve one's own measurement performance and to identify and avoid possible errors in the method, on the device or during execution.

AGQM offers a round robin test for pharmaceutical glycerol, which gives company laboratories and commercial service laboratories the opportunity to carry out external quality assurance for selected parameters of pharmaceutical glycerol analysis.

Each participant receives a set of samples to be able to determine the important parameters of the European Pharmacopoeia and selected additional standard methods. The results are determined in duplicate determination, then transmitted online to the AGQM and evaluated statistically. Each participant receives a complete round robin test report and a certificate of participation as proof of the laboratory's measurement performance.

Registration for the round robin test is possible until December 1st 2021 at <http://rrt.agqm-biodiesel.com>. Further information is available on the AGQM website (www.agqm-biodiesel.com) or at info@agqm-biodiesel.de.

AGQM is an organization founded by leading companies of the German biodiesel industry. As technical association AGQM predominantly deals with all issues concerning the quality management of biodiesel and its by-products.
